

Blood cancer

Blood cancer affects thousands of people across Australia, but most Australians aren't confident they know the symptoms to watch out for.¹

Lymphoma, leukaemia and myeloma are the three main types of blood cancer – they also share some symptoms.

Know the symptoms

Unexplained bruising

Pain in bone, joints or abdomen

Frequent infections

Tiredness

Paleness

Unexplained lumps or swellings

Unexplained fever

Unexplained rash

Unexplained weight loss

Shortness of breath

Drenching night sweats

Symptom source: Blood Cancer Research UK

Many of these symptoms can be vague, or may be related to other health conditions. If you're worried, speak with your general practitioner (GP) about your situation.

They can investigate your symptoms and, if recommended, refer you to a specialist haematologist at one of our convenient Epworth locations in East Melbourne, Richmond, Box Hill or Geelong.
